Run Lengths

TLP12V 12V POWER SUPPLY INPUT: 12V DC	TLS12V2 HIGH OUTPUT (HO) SIDE EMITTING 1.4W/FT	
WATTAGE	MAX RUN	MAX SPLIT
20W	14 FT	14 FT
24W	17 FT	17 FT
36W	22 FT	26 FT
50W	22 FT	34 FT
60W	22 FT	40 FT

- Max split can be split more than once, without exceeding the max single run in each leg.
- Max Run refers to the total single run of tapelight that can go on a power supply. Max Split refers to the total amount of tapelight that can go on a driver if it were separated into two runs.
- Max Run lengths are calculated with 12V or 24V DC at the start of the tape run. Voltage drop may occur if not using proper wire gauge. Please refer to the Voltage Drop and Wire Length Distance chart.
- Max Run lengths are calculated with no more than 30% light loss from the start of the tape run to the end of the tape run for optimal light consistency. If run lengths are extended beyond the recommended lengths noted above, there will be inconsistent light output and voltage drop.
- Overall distance of LED tape under load [illuminated sections]. If exceeded damage to the power supply and LED tape may result.
