Notes

²Delivered Lumens are Standard Ouput (SO) and Low Output (LO) at 80+CRI 4000K CCT. Use the following multiplier to estimate delivered lumens at other CCTs: 2700K = 0.94, 3000K = 0.96, 3500K = 0.98, 5000K = 1.02. All values nominal. See page 3 for photometry.

³See page 2 for actual fixture lengths.

Individual Fixtures & Continuous Rows

| 24' | 22' 3-15/32" | | |

Individual fixtures and rows are continuously illuminated and joined with included aligner brackets and hardware.

Individual fixtures up to 8' nominal and continuous rows up to 24' nominal are dimensioned as shown below. Continuous rows longer than 8' and patterns, including EPC/EMC and sensor locations must be approved prior to manufacturing.

Emergency & Sensor Locations

EPC will control entire length of individual fixtures. Individual fixtures of differing lengths will deliver the same lumens under EPC power (a 4' fixture will deliver the same total lumens over half the length of an 8' fixture). EMC controlled individual fixtures will deliver lumens per foot as originally specified, unless dimmed at time of power loss. Consult factory for EMC dimming override device.

| 4' Individual | |
|----------------|---|
| 8' Individual | For individual fixtures to 8' EPC/EMC will power entire fixture. |
| 24' Row (3x8') | |
| 24 How (3x6) | For continuous rows longer than 8' one EPC/EMC will be located in the feed section (end-left) of the row as shown below. |
| 24' Row (3x8') | |
| | If two EPC/EMC's are required their default locations will be in the feed section (end-left) and last section (end-right) as below |
| 24' Row (3x8') | Custom placement of one or more EPC/EMC's must be clearly identified during ordering. |
| 8' Individual | ·// /// //// //// //// //// //// //// |
| | SENSORS (Integral) for individual fixtures will control entire length of fixture and will be located on feed end of fixture. |
| 24' Row (3x8') | ·/// /// /// /// /// /// /// /// /// // |
| | SENSORS for rows by default will control the feed section (end-left) of the row. Sensors can control more than an 8' section within a row. Consult factory for sensor/section options, or for multiple sensors in a continuous row. |

Day-O-Lite offers a variety of tunable white and tunable color options for a range of human centric applications and budgets. It is recommended that a recognized authority on the benefits and best practices of tunable white be consulted prior to specification. As a rule, fewer channels will provide a basic level of performance for budget conscious applications. Conversely, an increased number of channels, a wider CCT range, higher CRI and more precise color consistency may be more appropriate depending on the application and desired results.

HOW TO SPECIFY

Select from the various channel/control options below and insert desired **Ordering Code** into the **COLOR TEMP** column of the Ordering Guide on page 1. No need to add a dimming option as the codes include the chosen protocol.
