### **DMX Requirements\***

with signal wire.

Each DUO4 DMX unit has TWO CHANNELS per fixture (1 to control intensity, 1 to control color). Fixture will be controlled by DMX number controlling intensity. We do not recommend more than 32 fixtures per DMX daisy chain. When placing order, please indicate DMX address (refer to DMX Address example below). DMX address will be listed on the back of each fixture.

	DMX Address						
Fixture	Intensity Control (ex. X)	Color Control (ex. X+1)					
#1	1	2					
#2	3	4					
#3	5	6					

The LED fixture provide RJ45 Socket to connect. (DMX cable NOT included.)
The final fixture should be terminated by the use of DMX Terminator (by others)

### **Compatible DMX Cabling List**

DMX uses a cable consisting of two twisted pairs plus a shield to carry data. The cable must be specifically impedance matched for the digital DMX signal, meaning that microphone cable or other non-rated cable **must not be used to carry DMX**. Network cable (Cat5, 5e or 6 cable) may be used to carry DMX in an installation; however special consideration must be given to shielding and termination. Under no circumstances should solid core cable like Cat5 be terminated into a screw down connector.

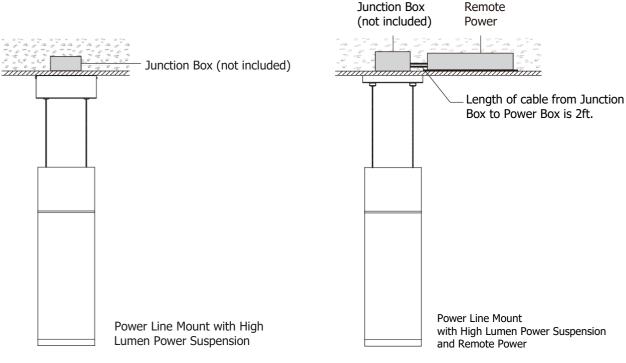

Meteor recommends the use of Belden 9729 for DMX installation. Belden 9729 is a two pair cable, which allows for a spare pair for 'out and back' type terminations if needed. Below is a list of other compatible Belden cables.
